

Clydebank College

Clydebank College – Case Study

Company Profile

Clydebank College first opened its doors as a technical college in 1965. Now, over 40 years later, the new campus resides at Queens' Quay by the River Clyde. It is now one of the leading higher education institutions in Scotland.

Business Needs

Clydebank College has moved premises and needed a DSE solution to support their re-assessment of employees following the move to make sure that the DSE users were re-assessed in line with the DSE Regulations.

Solution

Following a successful pilot LearnSafe's DSE module was deployed across the new DSE users, enabling a rapid roll-out of the training, with positive feedback from staff on the content, and usefulness of the module.

Benefits

The main benefit was the speed at which the solution could be used to train large numbers of users, as well as the benefits of having a complete reporting and learning management system to support the training. After a significant change, the DSE regulations require employees to be re-assessed; LearnSafe provides the fastest and most effective way to do this.

Alan Conner commented:

"The roll-out has gone well and we have received positive feedback from our staff on it."
